ABSTRACT:
Muslim world is facing many challenges regarding its economy, politics and culture these days. Rapid progress in science and technology is indispensable to face the challenges. Neither defense nor the industrial development of a country is possible in the absence of scientific knowledge and technical skills,. Similarly, agriculture department also demands advance and latest equipments and techniques for massive growth. In fact, advancement and development is associated with science and technology in contemprary world.
Islam is not a religion that concerns the spiritual matters of its followers only but it is a complete code of life that does not only want his followers to be successful hereafter but also in this world. Islam neither impose any ban on acquiring knowlewdge nor it is against technology. Acquiring knowledge and technology for the weel being of mankind is in accordance with the teachings of Islam In this way, the guidelines of Islam different from other religions, as far as knowledge and scientific technology is concern. This article highlights the need and importance of science and technology for the Muslim world in modern era.
